ABSTRACT OF THE DISCLOSURE

The invention provides a method for treating a patient with an intravascular implant. The method includes the steps of diagnosing the patient as having a vascular disease, coating at least a portion of the intravascular implant with a therapeutically effective amount of an inhibitor of mTOR, coating at least a portion of the intravascular implant with a therapeutically effective amount of an inhibitor of PDGF receptor, and implanting the intravascular implant in the patient to treat the vascular disease. The invention also provides a therapeutic device for treating or preventing a disease of a patient. The device includes an implant, an inhibitor of PDGF receptor disposed on the implant, and an inhibitor of mTOR disposed on the implant.
